

Silicone Custom compounds

Value Proposition

Our vision is to put silicone technology to work for our customers. Our mission is to use our experience in silicone technology to develop custom compounds that meet the most challenging applications. Through formulation expertise, we make conventional silicones perform extraordinarily for automotive, industrial, HVI and transportation applications. We work closely with our customers to help them achieve their goals for performance, quality, and cost. Success stories include optimizing a silicone's behavior in its uncured state to improve a customer's manufacturing efficiency. Our typical customer considers us a preferred supplier because of our speed, flexibility, and commitment to quality.

Momentive has on site custom compounding capability that can shorten the development cycle helping you get your product to market faster. Momentive is one of the largest manufacturers of silicone polymer materials in India which gives us a competitive advantage. Our mixing facilities are 100% dedicated to silicone compounds and that is our primary focus. This allows us to tailor compounds to meet specific processing needs of silicone fabrication equipment which includes injection, compression, and transfer molding along with extrusion capability. Because we mix our own silicone compounds we can respond to changing customer needs much quicker, including changes to the compound to meet your specification needs.

Value addition

- Customised product for your needs
- Available with or without colorants.
- Technical support for troubleshooting.
- Available in rectangular sheet and roll form.

PACKAGING : 20kg box

You can place your PO at silicone.response@momentive.com or fax at (+91 44 30412030)
